TECHNICAL SKILLS

Languages: Swift, JavaScript, C, C++, SQL

Frontend: React.js, SwiftUI, HTML, CSS, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, WebSocket

Databases: MongoDB, PostgreSQL, Redis

System Design: MVVM, REST API Design, Event-Driven Architecture, Caching, Performance Optimization

Tools & DevOps: Git, VS Code, Xcode, Docker, Postman, GitHub Actions, Vercel, Render

PROFESSIONAL SUMMARY

Software Engineer with experience building iOS and full-stack applications using React.js, Node.js, REST APIs, SwiftUI and MongoDB. Proven expertise in modular architecture, API performance optimization, production debugging, state management, and CI/CD. Delivered measurable improvements including 45% API latency reduction, 25% application stability improvement, and 66% frontend performance improvement.

EXPERIENCE

DigiValet, Software Engineer

January 2026 – June 2026

- Architected modular iOS SDK using Swift, SwiftUI, MVVM, and dependency injection, reducing integration time by 20% across 5+ screens
- Optimized REST APIs using concurrency, batching, caching, and network debugging, reducing latency by 45% (800ms → 440ms)
- Performed root cause analysis and production debugging, improving stability by 25%; built reusable components reducing code duplication by 30%

Itigai Technologies, Frontend Software Engineer

August 2025 – October 2025

- Optimized React.js performance through component restructuring, memoization, lazy loading, and render optimization, reducing FCP by 25% (3.2s → 2.4s)
- Built a real-time chatbot using WebSocket, event-driven architecture, and asynchronous state synchronization, supporting concurrent sessions at <500ms latency
- Implemented state management, caching, and API optimization, eliminating 60% of redundant API calls and reducing backend load by 40%

PROJECTS

Code Journey | *MongoDB, Express.js, React.js, Node.js*

- Owned end-to-end development of a full-stack platform from MVP to production, supporting 1,000+ users and 50+ interactive lessons with zero-downtime deployments
- Analyzed and optimized APIs, database queries, caching, and application performance, reducing API latency by 76% and React.js FCP by 66%
- Implemented CI/CD automation, deployment monitoring, and health-check-based orchestration to improve operational reliability

Predictive AI Platform | *REST APIs, Machine Learning, System Design*

- Engineered end-to-end development of a predictive ML platform integrating real-time frontend with stateless REST APIs, achieving <200ms p95 latency and horizontal scalability
- Implemented caching and feature-engineering strategies, reducing computational overhead by 40% while maintaining 75% prediction accuracy

Shortify - URL Shortener | *React.js, Node.js, Express.js, PostgreSQL, Redis, Docker*

- Engineered a production-grade URL shortener using PostgreSQL and Base62, supporting 56B+ unique URLs with collision-free 6-character codes
- Designed Redis cache-aside architecture with 24-hour TTL and explicit invalidation, reducing database load by 90% for frequently accessed links
- Implemented click analytics, request tracing, rate limiting, structured logging, and Docker builds, achieving sub-100ms redirect latency at scale

EDUCATION

Shri Vaishnav Vidhyapeeth Vishwavidyalaya Indore, India

Aug 2022 – June 2026

B.Tech in Computer Science Engineering
