TECHNICAL SKILLS

Languages: JavaScript, Swift, C, C++, SQL

Frontend: React.js, SwiftUI, HTML, CSS, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, WebSocket

Databases: MongoDB, PostgreSQL, MySQL

System Design: MVVM, REST API Design, Event-Driven Architecture, Caching, Performance Optimization

Tools & DevOps: Git, CI/CD (GitHub Actions), VS Code, Xcode, Docker, Postman, Vercel, Render

PROFESSIONAL SUMMARY

Full-stack Software Engineer (fresher, graduating June 2026) with hands-on experience building iOS and full-stack web applications using React.js, Node.js, SwiftUI, and MongoDB. Reduced API latency by up to 76%, cut frontend load time by 66%, and improved application stability by 25% across internship and personal projects.

EXPERIENCE

DigiValet, Software Engineer

January 2026 – June 2026

- Architected a modular iOS SDK using Swift, SwiftUI, MVVM, and dependency injection, cutting integration time 20% across 5+ screens
- Optimized REST APIs using concurrency, batching, and caching, reducing latency 45% (800ms → 440ms)
- Performed root cause analysis and production debugging, improving app stability 25%, and built reusable components that cut code duplication 30%

Itigai Technologies, Frontend Software Engineer

August 2025 – October 2025

- Optimized React.js rendering with component restructuring, memoization, and lazy loading, reducing First Contentful Paint 25% (3.2s → 2.4s)
- Built a real-time chatbot using WebSocket and event-driven architecture, supporting concurrent sessions at <500ms latency
- Implemented state management and API caching, eliminating 60% of redundant API calls and cutting backend load 40%

PROJECTS

Code Journey | MongoDB, Express.js, React.js, Node.js

- Built a full-stack learning platform end-to-end from MVP to production, serving 1,000+ users across 50+ interactive lessons with zero-downtime deployments
- Optimized APIs, database queries, and caching, cutting API latency 76% and React.js First Contentful Paint 66%
- Set up CI/CD automation and health-check-based deployment monitoring, improving operational reliability

Predictive AI Platform | REST APIs, Machine Learning, System Design

- Built a predictive ML platform connecting a real-time frontend to stateless REST APIs, achieving <200ms p95 latency with horizontal scalability
- Applied caching and feature-engineering strategies, cutting computational overhead 40% while holding 75% prediction accuracy

Shortify - URL Shortener | React.js, Node.js, Express.js, PostgreSQL, Redis, Docker

- Built a production-grade URL shortener using PostgreSQL and Base62 encoding, supporting 56B+ unique collision-free 6-character codes
- Designed a Redis cache-aside architecture with 24-hour TTL and explicit invalidation, cutting database load 90% for frequently accessed links
- Added click analytics, request tracing, rate limiting, and structured logging in Docker, achieving sub-100ms redirect latency at scale

EDUCATION

Shri Vaishnav Vidhyapeeth Vishwavidyalaya Indore, India

Aug 2022 – June 2026

B.Tech in Computer Science Engineering
