

# AKSHAT MAHAJAN

Software Engineer | Full-Stack & iOS

Indore, India | +91 91714 88184 | akshatmahajan32@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

## PROFESSIONAL SUMMARY

Software Engineer with experience building iOS and full-stack applications using Swift, SwiftUI, UIKit, React.js, Node.js, REST APIs, and MongoDB. Experienced in modular architecture, API performance optimization, production debugging, state management, and CI/CD. Delivered measurable improvements including 45% API latency reduction, 25% application stability improvement, and 25% frontend performance improvement.

## WORK EXPERIENCE

DigiValet | Jan 2026 - Jun 2026

### iOS Software Engineer

- Created a modular iOS SDK using Swift, SwiftUI, MVVM, and dependency injection, reducing feature integration time by 20% and establishing reusable architecture across 5+ production screens.
- Optimized production REST API performance using Swift concurrency (async/await), request batching, caching, and network debugging, reducing API latency by 45% (800ms → 440ms).
- Performed root cause analysis and production debugging using Xcode Instruments and application logs, resolving memory leaks and retain cycles and improving application stability by 25%.
- Developed reusable SwiftUI and UIKit components, improving component reusability, reducing code duplication, and accelerating feature development by 20%.
- Collaborated on API integration, application monitoring, performance optimization, debugging, and modular architecture across production iOS features.

Itigai Technologies | Aug 2025 - Oct 2025

### Frontend Software Engineer

- Optimized React.js application performance through component restructuring, React.memo, useMemo, lazy loading, and render optimization, reducing FCP by 25% (3.2s → 2.4s).
- Built a real-time chatbot interface using WebSocket, event-driven architecture, Redux, and asynchronous state synchronization, supporting concurrent sessions with <500ms latency.
- Implemented Redux state management, memoization, caching, and API optimization, eliminating 60% of redundant API calls and reducing backend load by 40%.

## TECHNICAL SKILLS

**Languages:** Swift, JavaScript (ES6+), TypeScript, SQL

**Frontend:** React.js, SwiftUI, UIKit, Redux, HTML5, CSS3, Tailwind CSS

**Backend:** Node.js, Express.js, REST APIs, WebSocket, API Integration

**Databases:** MongoDB, MySQL, PostgreSQL, Redis

**Architecture:** MVVM, Dependency Injection, Modular Architecture, State Management, REST API Design, Event-Driven Architecture, Caching, Performance Optimization

**Tools & DevOps:** Git, GitHub, Xcode, Xcode Instruments, Docker, Postman, GitHub Actions, Vercel, Render

## PROJECTS

### Code Journey ([Link](#))

React.js, Redux, Node.js, MongoDB

- Built and evolved a full-stack developer learning platform from an HTML/CSS MVP to React, Redux, Node.js, and MongoDB, supporting 1,000+ users and 50+ interactive lessons.
- Designed and optimized REST APIs, database queries, caching, and application monitoring, reducing API latency by 76% (500ms → 120ms).
- Improved React.js frontend performance by 66% (FCP: 3.2s → 1.1s) using React.memo, useMemo, lazy loading, and component memoization.
- Implemented CI/CD automation, deployment monitoring, and zero-downtime deployments using GitHub Actions and Vercel.

### Predictive AI Platform ([Link](#))

REST APIs, Machine Learning, System Design

- Designed an end-to-end machine learning platform integrating predictive models with a real-time frontend through stateless REST APIs, targeting <200ms p95 latency and horizontal scalability.
- Implemented caching and feature-engineering strategies, reducing computational overhead by 40% while achieving 75% prediction accuracy.
- Designed the application around scalable API architecture, efficient data processing, model integration, and performance optimization.

### URL Shortener ([Link](#))

React.js, Node.js, Express.js, PostgreSQL, Redis, Docker

- Built a production-grade URL shortening platform with React, Node.js, Express.js, PostgreSQL, and Redis, supporting low-latency redirects and URL analytics.
- Implemented collision-free Base62 short-code generation using PostgreSQL atomic counters, supporting 56B+ unique URLs with 6-character codes.
- Designed a Redis cache-aside architecture with 24-hour TTL and explicit invalidation, reducing database load by ~90% for frequently accessed links.
- Implemented non-blocking click analytics, Docker multi-stage builds, healthcheck-based service orchestration, request tracing, rate limiting, and structured logging for production readiness.

## EDUCATION

Shri Vaishnav Vidhyapeeth Vishwavidyalaya

Indore, India

Bachelor of Technology (B.Tech.) – Computer Science Engineering

Aug 2022 - Jun 2026
